## Indian Standard

 SPECIFICATION FOR PRECAST CONCRETE PIPES ( WITH AND WITHOUT REINFORCEMENT )
## (Third Revision)

0. FOREWORD

0.1 This Indian Standard (Third Revision) was adopted by the Burcau of Indian Standards on 15 November 1988, after the draft finalized by the Cement and Concrete Sectional Committee had been approved by the Civil Engineering Division Council.
0.2 Reinforced cement concrete pipes are widely used for water mains, sewers, culverts and in irrigation. When used for carrying highly acidic sewage or industrial wastes, necessary precautions shall have to be taken against chemical attack and corrosion. This standard lays down the requirements of quality and dimensions of concrete pipes to serve as guidance to the manufacturers and users in producing and obtaining concrete pipes of suitable quality. Guidance regarding laying of concrete pipes is given in IS : 783-1985 ${ }^{1}$.
0.3 This standard was first published in 1956 and subsequently revised in 1961 and 1971. The present revision has been taken up with a view to incorporating the modifications found necessary as a result of experience gained with the use of this standard. The title of the standard has been modified as 'Specification for precast concrete pipes (with and without reinforcement )'.
0.3.1 This revision incorporates a number of changes, the most important of them being:
a) Allowing the use of cements conforming to IS : 8041-1978 ${ }^{2}$, IS : 8043-1978 ${ }^{3}$ and IS: $8112-1976^{4}$ for the manufacture of concrete pipes;
b) Allowing the use of wire fabric conforming to IS: 1566-1982 ${ }^{\text {² }}$, deformed bars and wires

[^0]conforming to IS : 1786-1985 ${ }^{1}$ and structural steel bars conforming to IS : 226-1975 ${ }^{2}$ for manufacture of concrete pipes;
c) Class NP4 pipes given in the earlier standard have been deleted and class NP3 pipes of the earlier standard have been re-designated as class NP4 after incorporating a new class, medium-duty non-pressure pipes which have been designated as class NP3. The table for the earlier class NP3 pipes, which in this revision have been re-designated as class NP4, has been modified so as to make it suitable for railway loading also and additional sizes have been included. Longitudinal and spiral reinforcement for different classes of pipes and three edge bearing test load of class NP2 pipes have also been modified in this revision. Reinforcement to be provided in socket of different classes of pipes for rubber ring joint have also been included in this revision;
d) Inclusion of details for spigot and socket ends for all the classes of pipes and details of flush type. joints for the non-pressurepipes;
e) Inclusion of figures illustrating some typical arrangements of reinforcement in socket;
f) Deletion of sand bearing test and bursting test from this standard. Bursting test has been replaced by splitting tensile strength test of concrete cylinders for pressure pipes;
g) Modification in the length of pipes allowing the manufacturer to declare the effective length which shall be between 1.0 and 4.0 m ;
h) Modification in different design requirements of the pipes;
j) Inclusion of larger diameter pipes for all classes of pipes except for class NP1 and Pl;

[^1]k) Inclusion of a clause on repair of pipes; and
m) Modification in sampling and inspection of pipes.
0.3.2 In order to accommodate the existing moulds used by the manufacturers for manufacturing class NP3 pipes given in the earlier standard, the diameters of class NP3 and NP4 pipes in this revision have been given as nominal internal diameters. The actual internal diameters of these pipes are, therefore, to be declared by the manufacturers. However, the manufacturers should gradually change their moulds as it has been desired that after 1995, these nominal internal diameters
should be treated as actual internal diameters with tolerances specified in this standard and such moulds should be made suitable for manufacturing pipes with flexible rubber ring joints.
0.4 For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test, shall be rounded off in accordance with IS : 2-1960 ${ }^{1}$. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.
${ }^{1}$ Rules for rounding off numerical values (revisea ).

## 1. SCOPE

1.1 This standard covers the requirements for reinforced and unreinforced precast cement concrete pipes, of both pressure and non-pressure varieties used for water mains, sewers, culverts and irrigation.
1.2 Prestressed concrete pipes and pipes with noncircular section are not covered by this standard.

## 2. TERMINOLOGY

2.0 For the purpose of this standard, the following definitions shail apply.
2.1 Working Pressure - It is the maximum sustained internal pressure excluding abnormal conditions such as surge ( water hammer), to which the pipeline may be subjected when in use.
2.2 Site Test Pressure - It is the pressure to be applied to the pipeline or sections thereof, after laying, to test its strength and watertightness.

Note - The site test pressure to be imposed will have to be determined when placing orders for pipes and fittings. In general, this pressure should not be less than the maximum pipelines operating pressure plus the calculated surge pressure but in no case should exceed the hydrostatic test pressure.
2.3 Hydrostatic Test Pressure - It is the maximum pressure which the pipe can withstand without any leakage when tested for hydrostatic pressure in accordance with this standard and IS : 3597-1985 ${ }^{1}$.
2.4 Surge (Water Hammer) Pressure - It is the pressure which is produced by a change of velocity of the moving stream and becomes maximum when there is a sudden stoppage which may be caused by the closing of a valve or by shutting down a pump station.

## 3. CLASSIFICATION

3.1 For the purpose of this standard, concrete pipes shall be classified as under:

[^2]Class

## Description

NP1

NP4 Reinforced concrete, heavy-duty, nonpressure pipes

P1 Reinforced concrete pressure pipes tested to a hydrostatic pressure of 0.2 MPa ( 20 m head)

P2 Reinforced concrete pressure pipes tested to a hydrostatic pressure of 0.4 MPa ( 40 m head)
P3 Reinforced concrete pressure pipes tested to a hydrostatic pressure of 0.6 MPa ( 60 m head)
Note - The uses are only by way of recommendations as a general guidance and the exact usage shall be decided by the engineer-in-cnarge.
3.2 Unreinforced and reinforced concrete non-pressure pipes shall be capable of withstanding a test pressure of 0.07 MPa ( 7 m head ).

## 4. MATERIALS

4.1 For precast concrete pipes, materials complying with the requirements given in 4.2 to 4.6 shall be used.
4.2 Cement - Cement used for the manufacture of unreinforced and reinforced concrete pipes shall conform to IS : 269-1.976 ${ }^{1}$ or IS : 455-1976 ${ }^{2}$ or IS : 1489-1976 ${ }^{3}$ or IS : 8041-1978 ${ }^{4}$ or IS : $8043-1978^{5}$ or IS : 8112-1976 ${ }^{6}$.

Note - The use of pozzolana as an admixture to Portland cement is not permitted. Unless otherwise specified by the purchaser, the type of cement to be used is left to the discretion of the manufacturer.
4.3 Aggregates - Aggregates used for the manufacture of unreinforced and reinforced concrete pipes shall conform to IS : 383-19707. The maximum size of aggregate should not exceed one third the thickness of the pipe or 20 mm , whichever is smaller.
4.4 Reinforcement - Reinforcement used for the manufacture of the reinforced concrete pipes shall be mild steel Grade 1 or medium tensile steel bars conforming to IS : 432 ( Part 1 )-1982 ${ }^{8}$ or harddrawn steel wire conforming to IS : 432 ( Part 2 )$1982^{9}$ or structural steel (standard quality) bars conforming to IS : 226-1975 ${ }^{10}$. Where soft grade wire is used, it shall conform to IS : 280-1978 ${ }^{11}$.

Note - Wire fabric conforming to IS : 1566-198213 or deformed bars and wires conforming to IS : 1786$1985{ }^{13}$ may also be used.
4.5 Concrete or Mortar - Concrete used for the manufacture of unreinforced and reinforced concrete pipes and collars shall conform to IS : 456-1978 ${ }^{14}$.

[^3]4.5.1 The concrete for non-pressure pipes shall have a minimum cement content of $360 \mathrm{~kg} / \mathrm{m}^{3}$ and a minimum compressive strength of $20 \mathrm{~N} / \mathrm{mm}^{2}$ at 28 days. If mortar is used, it shall have a minimum cement content of $450 \mathrm{~kg} / \mathrm{m}^{3}$ and a compressive strength not less than $20 \mathrm{~N} / \mathrm{mm}^{2}$ at 28 days. The concrete for pressure pipes shall have a minimum cement content of $450 \mathrm{~kg} / \mathrm{m}^{3}$ and a minimum compressive strength of $25 \mathrm{~N} / \mathrm{mm}^{2}$ at 28 days. If mortar is used, it shall have a minimum cement content of $600 \mathrm{~kg} / \mathrm{m}^{3}$ and a compressive strength not less than $25 \mathrm{~N} / \mathrm{mm}^{2}$ at 28 days.

Where the process of manufacture is such that the strength of concrete or mortar in the pipe differs from that given by tests on cubes, the two may be related by a suitable conversion factor. If the purchaser requires evidence of this factor, he shall ask for it before placing the order. The conversion factor for 28 days compressive strength for spun concrete may be taken as 125 in the absence of any data.
4.5.2 For pressure pipes splitting .tensile strength of concrete cylinders at 28 days, when tested in accordance with IS : $5816-970^{1}$, shall be $2.5 \mathrm{~N} / \mathrm{mm}^{2}$.
4.5.3 Compressive strength tests shall be conducted on 15 cm cubes in accordance with the relevant requirements of IS : 456-1978 ${ }^{2}$ and IS : 516-1959 ${ }^{3}$.
4.5.4 The manufacturer shall give a certificate indicating the quantity of cement in the concrete mix.
4.6 Rubber Ring - Rubber ring chords used in pipe joints shall conform to Type 1A of IS : 5382-19674.

## 5. DESIGN

5.1 General - Reinforced concrete pipes either spun or cast shall be designed such that the maximum tensile stress in the circumferential steel due to specified hydrostatic test pressure does not exceed the limit of $125 \mathrm{~N} / \mathrm{mm}^{2}$ in the case of mild steel rods, $140 \mathrm{~N} / \mathrm{mm}^{2}$ in the case of hard-drawn steel wires and high strength deformed steel bars and wires.
5.1.1 The barrel thickness shall be such that under the specified hydrostatic test pressure, the maximum tensile stress in concrete, when considered as effective to take stress along with the tensile reinforcement, shall not exceed $2 \mathrm{~N} / \mathrm{mm}^{2}$ but the wall thickness shall be not less than those given in Tables 1 to 7 subject to $7.2(\mathrm{c})$.

[^4]5.1.2 Pipes of length above 3 m and up to 4 m may be supplied by agreement between the user and the supplier and for such pipes, the quantity of reinforcement shall be modified as below:

Longitudinal reinforcement - Reinforced cement concrete pipes of lengths up to 4 m may be accepted if the longitudinal reinforcement is increased in proportion to the square of length compared with what is used for 3 m length as specified in Tables 2 to 7.

For ' $L$ ' (in metre) length of pipe, longitudinal reinfurcement shall be $\frac{L^{2}}{3^{2}}$ times the longitudinal reinforcement used for 3 m long pipes.
5.1.3 Longitudinal reinforcement shall be provided to ensure rigidity and correct location of cages (grids) longitudinally and to limit the effects of transverse cracking. Minimum longitudinal reinforcement shall be as given in Table 2 to 7.
5.2 Reinforcement - The reinforcement in the reinforced concrete pipe shall extend throughout the length of the pipe and shall be so designed that it may be readily placed and maintained to designed shape and in the proper position within the pipe mould during the manufacturing process. The circumferential and longitudinal reinforcement shall be adequate to satisfy the requirements specified under $\mathbf{5 . 1}$.
5.2.1 The pitch of circumferential reinforcement shall be not more than the following:
a) 200 mm for pipes of nominal internal diameter 80 to 150 mm ,
b) 150 mm for pipes of nominal internal diameter 200 to 350 mm , and
c) 100 mm for pipes of nominal internal diameter 400 mm and above.

The pitch shall also be not less than the maximum size of aggregate plus the diameter of the reinforcement bar used.
5.2.2 The quantity and disposition of steel in pipes may be decided by mutual agreement between the purchaser and the supplier; however, it shall be proved by calculations and tests that the quality of the pipes conforms to all the requirements specified in the standard. In the absence of calculations and tests, the reinforcement given in Tables 2 to 7 shall be used as minimum reinforcement.
5.2.3 If so required by the purchaser, the manufacturer shall give a certificate indicating the details relating to quality, quantity and dispersion of steel in the pipes as well as the clear cover to the steel provided in the pipe.
5.3 Ends of Pipes - The ends of concrete pipes shall be suitable for flush ( see Fig. 1), collar ( see Fig. 2 ), socket and spigot, roll on joints or confined gasket joints. Dimensions of collars shall be according to details given in Tables 1 and 2. The reinforcement for the collars shall be as given in Table 2. The ends of collar reinforcement shall have a full ring at both ends and the longitudinal reinforcement shall be proportional to the length of the collar. Dimensions of spigot and socket for unreinforced concrete pipes shall be as given in Table 8 . Dimensions of spigot and socket for rubber ring roll on jointed pipes shall be as given in Tables 9 to 13. Reinforcement in socket of rubber ring jointed pipes shall be as given in Table 14.

Note 1 - Bends, junctions and specials for concrete pipes covered under this standard shall conform to the requirements of IS : 7322-19851.

Note 2 - All the joints in pressure pipes shall be flexible rubber ring joints by the end of the year 1990.
Note 3-Some typical arrangements of reinforcement in socket are illustrated in Fig. 3 and 4.
5.3.1 The pipe joints shall be capable of withstanding the same pressures as the pipe.

Note - The requirement of 5.3.1 does not imply that the collar shall also be tested for the test pressure for pipes specified in 3.1, 3.2 and 9.2.
${ }^{1}$ Specification for specials for steel cylinder reinforced
oncrete pipes (first revision ).

Note 1 - If mild steel is used for spiral reinforcement, the weight specified under col 9 and 10 shall be increased to $140 / 125$.

Note 2 - Soft grade mild steel wire for spirals may be used for pipes of internal diameters $80 \mathrm{~mm}, 100 \mathrm{~mm}$ and 150 mm only, by increasing weight to $140 / 84$.

Note 3-The longitudinal reinforcement given in this table is valid for pipes up to 2 m effective length for internal diameter of pipe up to 250 mm and up to 3 m effective length for higher diameter pipes.

| 2400 | 200 | $12+12$ | 14.88 | 146.61 | 114.96 | 172.44 |
| 2600 | 215 | $12+12$ | 14.88 | 175.76 | 124.54 | 186.81 |

Note 1 - The actual internal diameter is to be declared by the manufacturer and the tolerance is to be applied on the declared diameter ( see also 0.3.2 ).

Note 2 - Minimum thickness and minimum length of collars shall be the same as that for the next higher size available in NP2 class pipes corresponding to the calculated inner diameter of collars.

Note 3 - The longitudinal reinforcement given in this table is valid for pipes up to 2 m effective length for internal diameter of pipe up to 250 mm and up to 3 m effective length for higher diameter pipes.

Note 4 - Concrete for pipes above 1800 mm nominal diameter shall have a minimum compressive strength of $35 \mathrm{~N} / \mathrm{mm}^{2}$ at 28 days and a minimum cement content of $400 \mathrm{~kg} / \mathrm{m}^{3}$.

NOTE 5 - If mild steel is used for spiral reinforcement, the weight specified in col 5 shall be increased to 140/125.

## TABLE 4 DESIGN AND STRENGTH TEST REQUIREMENTS OF CONCRETE PIPES OF CLASS NP4 REINFORCED CONCRETE, HEAVY-DUTY, NON-PRESSURE PIPES

(Clauses 5.1.1, 5.1.2, 5.1.3, 5.2.2, 6.3.2 and 7.1)

Under Review

TABLE 5 DESIGN AND STRENGTH TEST REQUIREMENTS OF CONCRETE PIPES OF CLASS P1 REINFORCED CONCRETE PRESSURE PIPES SAFE FOR $0 \cdot 2$ MPa PRESSURE TEST
(Clauses 5.1.1, 5.1.2, 5.1.3, 5.2.2, 6.3.2 and 7.1)

Note 1 - Strength requirements for pressure pipes shall be the same as for NP2 class pipes.
Note 2 - If mild steel is used for spiral reinforcement, the weight specified under col 5 shall be increased to $140 / 125$.

Note 3 - Soft grade mild steel wire for spirals may be used for pipes of internal diameters $80 \mathrm{~mm}, 100 \mathrm{~mm}$ and 150 mm only, by increasing weight to 140/84.

Note 4 - The longitudinal reinforcement given in this table is valid for pipes up to 2 m effective length for internal diameter of pipe up to 250 mm and up to 3 m effective length for higher diameter pipes.

TABLE 6 DESIGN AND STRENGTH TEST REQUIREMENTS OF CONCRETE PIPES OF CLASS P2 REINFORCED CONCRETE PRESSURE PIPES SAFE FOR 0.4 MPa PRESSURE TEST
(Clauses 5.1.1, 5.1.2, 5.1.3, 5.2.2, 6.3.2 and 7.1 )

Note 1 - Corners to be rounded off.
Note 2-The dimensions $T, T S, H, L, K$ and $b$ shall conform to the values given in this table as these are critical dimensions. Other dimensions are for guidance only. The following tolerances shall apply on the critical dimensions:

| Dimensions | Tolerances |
| :---: | :--- |
|  |  |
| $H$ and $T S$ | Same as that of wall thickness given in 7.2. |
| $K$ and $L$ | Half the tolerances on wall thickness given in 7.2. |
| $b$ | $\pm 0.5 \mathrm{~mm}$. |
|  | $\pm 1 \mathrm{~mm}$ for 28 mm and $\pm 1.5 \mathrm{~mm}$ for 35 mm. |

## TABLE 12 SPIGOT AND SOCKET DIMENSIONS OF P2 CLASS PIPES (RUBBER RING ON JOINT)

(Clauses 5.3 and 7.2 )
All dimensions in millimetres.

| 2000 | 11.78 | - | - | - | - | - |
| 2200 | 12.88 | - | - | - | - | - |

Note 1 - Longitudinal reinforcement shall be proportional to the length of socket cage as given in Tables 2 to 7 .
Note 2 - If mild steel is used for spiral reinforcement, the weight specified above shall be increased to 140/125.
5.4 Cover - The minimum clear cover for reinforcement in pipes and collars shall be as given below:

## Minimum Clear Cover mm

a) Barrel thickness

1) Up to and including 25 mm
2) Over 25 mm and up to and 8 including 30 mm
3) Over 30 mm and up to and 10 including 75 mm
4) Over 75 mm15
b) At spigot steps 4
c) At end of longitudinals

Note-An effective means shall be provided for maintaining the reinforcement in position and for ensuring correct cover during manufacture of the unit. Spacers for this purpose shall be of rustproof material or of steel protected against corrosion.

## 6. MANUFACTURE

6.1 General - The methods of manufacture shall be such that the form and dimensions of the finished pipe are accurate within the limits specified in this standard. The surfaces and edges of the pipes shall be well defined and true, and their ends shall be square with the longitudinal axis.
6.2 Concrete Mixing - Concrete shall be mixed in a mechanical mixer.
6.2.1 Mixing shall be continued until there is a uniform distribution of the materials and the mass is uniform in colour and consistency, but in no case shall the mixing be done for less than two minutes.
6.2.2 Water-cement ratio shall be less than 0.5 .
6.2.3 The concrete shall be placed before setting has commenced. It should be ensured that the concrete is not dropped freely so as to cause segregation. The concrete shall be consolidated by spinning, vibrating, spinning combined with vibrations, or other appropriate mechanical means.
6.3 Reinforcement Cages - Reinforcement cages for pipes shall extend throughout the pipe barrel. The cages shall consist of spirals or rings and straights of hard-drawn steel wire or mild steel rod and may be circular. Circular cages and longitudinal reinforcement shall be placed symmetrically with respect to the thickness of the pipe wall. The spirals shall end in a complete ring at both the ends of a pipe.
6.3.1 Pipes having barrel thickness above 75 mm shall have double reinforcement cage and the amount of steel in the outer cage shall be 75 percent of the mass of the inner cage whilst the total shall conform to the requirements specified in the relevant tables of this standard. The total longitudinal steel per pipe shall be as given in the relevant tables of the standard but the distribution shall be such that the round shape of the cage is not disturbed.
6.3.2 Diagonal reinforcement may be provided in pipes for which the cages are not welded so as to help in binding the cage securely. It shall, however, be ensured that the clear cover for any reinforcement is not below the limits specified in 5.4. If diagonal reinforcement is provided, it shall be considered as part of the longitudinal reinforcement given in Tables 2 to 7.
6.3.3 Single reinforcement cage shall be located near the inner surface of the pipe with adequate clear cover.

### 6.4 Curing

6.4.1 Water Curing - Pipes manufactured in compliance with this standard shall be water cured for a period of not less than 2 weeks in case of pipes made from ordinary Portland cement or Portland slag cement or Portland pozzolana cement or hydrophobic Portland cement, and not less than 1 week in case of pipes made from rapid-hardening Portland cement or 43 grade ordinary Portland cement. Pipes may be water cured by immersing in water, covering with water-saturated material or by a system of perforated pipes, mechanical sprinklers, porous hose, or by any other approved method that will keep the pipe moist during the specified curing period. In the case of large pipe projecting partly above the water level, the projected portion shall be kept wet by any suitable means.
6.4.2 Steam Curing - Steam curing of concrete pipes may be permitted provided the requirements of pressure and non-pressure steam curing are fulfilled
and the pipes conform to the requirements of this specification.
6.4.3 The manufacturer may, at his option, combine the methods described in 6.4.1 and 6.4.2 as long as the specified strength is attained.

## 7. DIMENSIONS

7.1 Pipes - The internal diameter, wall thickness, length and thickness of collar of pipes, the minimum reinforcements and strength test requirements for different classes of pipes ( see 3.1), shall be as specified in Tables 1 to 7. The manufacturer shall inform the purchaser of the effective length of spigot and socket, and flush jointed pipes that he is able to supply. For collar jointed pipes, effective length shall be 2 m up to 250 mm nominal diameter pipes and $2 \cdot 5,3 \cdot 0,3.5$ or 4.0 m for pipes above 250 mm nominal diameter.

Note - Pipes of internal diameter, wall thickness and length of barrel and collar other than those specified in 7.1 may be supplied by mutual agreement between the purchaser and the supplier. In such case, the design of pipes submitted to the purchaser shall include all standard details as covered in Tables 1 to 7 .
7.2 Tolerances - The following tolerances shall be permitted:

## Dimensions

a) Overall length
b) Internal diameter of pipes or socket:

1) Up to and including $\pm 3 \mathrm{~mm}$ 300 mm
2) Over 300 mm and $\pm 5 \mathrm{~mm}$ up to and including 600 mm
3) Over 600 mm and $\pm 7 \mathrm{~mm}$ up to and including 1200 mm
4) Over $1200 \mathrm{~mm} \quad \pm 10 \mathrm{~mm}$
c) Wall thickness:
5) Up to and including $\pm 2 \mathrm{~mm}$ 30 mm
6) Over 30 mm and up to $\pm 3 \mathrm{~mm}$ and including 50 mm
7) Over 50 mm and up to $\pm 4 \mathrm{~mm}$ and including 65 mm
8) Over 65 mm anci up to $\pm 5 \mathrm{~mm}$ and including 80 mm
9) Over 80 mm and up to $\pm 6 \mathrm{~mm}$ and including 95 mm
10) Over 95 mm

## Tolerances

$\pm 1$ percent of standard length
$\pm 7 \mathrm{~mm}$

Note - In case of pipes with flexible rubber ring joints, the tolerance on thickness near the ends will have to be reduced. Near the rubber ring joints, the tolerance on thickness shall be as given in Tables 9 to 13.

## 8. WORKMANSHIP AND FINISH

8.1 Finish - Pipes shall be straight and free from cracks except that craze cracks may be permitted. The ends of the pipes shall be square with their longitudinal axis so that when placed in a straight line in the trench, no opening between ends in contact shall exceed 3 mm in pipes up to 600 mm diameter (inclusive), and 6 mm in pipes larger than 600 mm diameter.
8.1.1 The outside and inside surfaces of the pipes shall be smooth, dense and hard, and shall not be coated with cement wash or other preparation unless otherwise agreed to between the purchaser and the manufacturer or the supplier. For better bond, inner surface of the collar may be finished rough.
8.1.2 The pipes shall be free from defects resulting from imperfect grading of the aggregate, mixing or moulding.
8.1.3 Pipes shall be free from local dents or bulges greater than 3.0 mm in depth and extending over a length in any direction greater chan twice the thickness of barrel.
8.1.4 Pipes may be repaired, if necessary, because of accidental injury during manufacture or handling and shall be accepted if in the opinion of the purchaser, the repairs are sound and appropriately finished and cured, and the repaired pipe conforms to the requirements of this specification.
8.2 Deviation from Straight - The deviation from straight in any pipe throughout its effective length, tested by means of a rigid straight edge parallel to the longitudinal axis of the pipe shall not exceed, for all diameters, 3 mm for every metre run.

## 9. TESTS

9.1 Test Specimens - All pipes for testing purposes shall be selected at random from the stock of the manufacturer and shall be such as would not otherwise be rejected under this standard.
9.1.1 During manufacture, tests on concrete shall be carried out as detailed in IS : 456-1978 ${ }^{1}$. The manufacturer shall supply, when required to do so by the purchaser or his representative, the results of compressive tests of concrete cubes ( see 4.5.1) and split tensile tests of concrete cylinders ( see 4.5.2) made from the concrete used for the pipes. The manufacturer shall supply cylinders or cubes for test purposes required by the purchaser, and such cylinders or cubes shall withstand the tests prescribed in 4.5 .1 and 4.5.2. Every pressure pipe shall be tested by the manufacturer for the hydrostatic test

[^5]pressure ( see 3.1). For non-pressure pipes, 2 percent of the pipes shall be tested for hydrostatic test pressure.
9.2 The specimens of pipes selected in accordance with 9.1 and subjected to the following tests in the given sequence shall withstand the design loads:
a) Hydrostatic test, as described in IS : 35971985 ${ }^{1}$;
b) Three-edge bearing test as described in IS : 3597-1985 ${ }^{1}$; and
c) Absorption test, as described in IS:35971985…
9.2.1 The manufacturer shall regularly carry out absorption tests on specimens corresponding to the pipe manufactured and shall provide sufficient proof to the purchaser that the pipes supplied satisfy the absorption test. If, however, the purchaser desires to have absorption test carried out on any sample, the same may be done on mutually agreed terms.
9.2.2 The absorption test when conducted in accordance with the method described in 6 of IS : 3597-1985 ${ }^{1}$, shall satisfy the following requirements:
a) Absorption in the first 10 minutes shall not exceed 2.5 percent of the dry mass, and
b) Total absorption at the end of 24 hours shall not exceed 6.5 percent of the dry mass.

## 10. SAMPLING AND INSPECTION

### 10.1 Scale of Sampling

10.1.1 Lot - In any, consignment, all the pipes of same class, same size and belonging to the same mix of concrete shall be grouped together to constitute a lot.
10.1.2 For ascertaining the conformity of the material to the requirements of this specification, samples shall be tested from each lot separately.
10.1.3 The number of pipes to be selected from the lot shall depend on the size of the lot and shall be according to Table 15 .

TABLE 15 SCALE OF SAMPLING AND PERMISSIBLE

| No. of Pipes in the Lot | For Requirements Undek 7 and 8 |  | Sample Size for Tests Under 9.2 <br> (Excluding Ultimate <br> Load Test ) |
| :---: | :---: | :---: | :---: |
|  | $\underset{\text { Size }}{\text { Sample }}$ |  |  |
|  |  | Permissible |  |
|  |  | Number of Defectives |  |
| (1) | (2) | (3) | (4) |
| Up to 50 | 8 | 0 | 2 |
| 51 to 100 | 13 | 1 | 3 |
| 101 to 300 | 20 | 2 | 5 |
| 301 to 500 | 32 | 3 | 7 |
| 501 and above | 50 | 5 | 10 |

[^6]10.1.3.1 These pipes shall be selected at random. In order to ensure the randomness of selection, procedures given in IS : 4905-1968 ${ }^{1}$ may be followed.

### 10.2 Number of Tests and Criteria for Conformity

10.2.1 All the pipes selected according to 10.1.3 shall be inspected for dimensional requirements ( see 7), finish (see 8.1) and deviation from straight (see 8.2 ). A pipe failing to satisfy one or more of these requirements shall be considered as defective.

10-2.1.1 The lot shall be declared as conforming to these requirements if the number of defectives found in the sample does not exceed the number of defectives given in col 3 of Table 15.
10.2.2 The lot having found satisfactory shall be further subjected to the tests given under 9.2 except ultimate load test. For this purpose, the number of pipes given in col 4 of Table 15 shall be selected from the lot. These pipes shall be selected from those that have satisfied the requirements given in $\mathbf{1 0 . 2 . 1}$. For ultimate load test, the number of pipes to be checked shall be according to mutual agreement between the purchaser and the manufacturer. However, ultimate load test shall not be done for a lot size of 20 pipes or less.

[^7]10.2.2.1 The lot shall be declared as conforming to the requirements of this specification if there is no failure under 10.2.2

## 11. MARKING

11.1 The following information shall be clearly marked on each pipe:
a) Name of manufacturer or his registered trademark or both,
b) Class and size of pipe, and
c) Date of manufacture.

The above information shall be clearly marked on outside only for pipes up to and including 350 mm internal diameter, and both outside and inside for pipes above 350 mm internal diameter.
11.1.1 Each pipe may also be marked with the Standard Mark.

Note - The use of the Standard Mark is governed by the provisions of the Bureau of Indian Standards Act, 1986 and the Rules and Regulations made thereunder. The Standard Mark on products covered by an Indian Standard conveys the assurance that they have been produced to comply with the requirements of that standard under a well defined system of inspection, testing and quality control which is devised and supervised by BIS and operated by the producer. Standard marked products are also continuously checked by BIS for conformity to that standard as a further safeguard. Details of conditions under which a licence for the use of the Standard Mark may be granted to manufacturers or producers may be obtained from the Bureau of Indian Standards.

## Bureau of Indian Standards

BIS is a statutory institution established under the Bureau of Indian Standards Act, 1986 to promote harmonious development of the activities of standardization, marking and quality certification of goods and attending to connected matters in the country.

## Copyright

BIS has the copyright of all its publications. No part of these publications may be reproduced in any form without the prior permission in writing of BIS. This does not preclude the free use, in the course of implementing the standard, of necessary details, such as symbols and sizes, type or grade designations. Enquiries relating to copyright be addressed to the Director (Publication), BIS.

## Review of Indian Standards

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard along with amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the latest issue of 'BIS Handbook' and 'Standards Monthly Additions'.

## AMENDMENT NO. 1 JANUARY 1991

TO

## IS 458: 1988 SPECIFICATION FOR PRECAST CONCRETE PIPES (WITH AND WITHOUT REINFORCEMENT )

## (Third Revision)

( Page 2, clause 0.3.2) - Insert the following new clause after 0.3.2:
'0.3.3 Because of increase in barrel wall thickness of class NP2 pipes of internal diameter 600 mm to 1200 mm , both nominal and actual internal diameters have been specified for class NP2 pipes in order to accommodate the existing moulds. As it has been desired that all non-pressure pipes should have flexible rubber ring joints after 1995, the manufacturers should gradually change their moulds suitable for manufacturing such pipes and atfer 1995 nominal internal diameters should be treated as actual internal diameters.'
( Page 3, clause 4.5.2, line 3) - Insert the words 'not less than' after the words 'shall be'.
(Page 3, clause 4.6) - Substitute 'Type 2 of IS 5382:1985' for 'Type 1 A of IS 5382: 1967'.
( Page 3, foot-note No. 4 ) - Insert '( second revision )' at the end.

## AMENDMENT NO. 2 <br> APRIL 1991

## IS 458:1988 SPECIFICATION FOR PRECAST CONCRETE PIPES (WITH AND WITHOOT REINFORCRMENT) (Third Revision)

[Page 1, clause 0.3.1 (c)] - Substitute the following for the existing matter:
c) In this revision a new classification of pipes has been followed. In respect of strength test, the new classes compare with the old classification as follows:

| Class NP1 | Same as class NP1 of earlier standard |
| :--- | :--- |
| Class NP2 | Equivalent to class NP2 of earlier <br> standard |
| Class NP3 | New class introduced in this revision |
| Class NP4 | Equivalent to class NP3 and NP4 of <br> earlier standard |
| Class P1,P2 <br> and P3 | Same as class P1,P2 and P3 of earlier <br> standard |

Longitudinal and spiral reinforcement for different classes of pipes and three edge bearing test load of class NP2 pipes have been modified in this revision. Reinforcement to be provided in socket of different classes of pipes for rubber ring joint have also been included. Pipes suitable for railway loading are not included in this standard at present and this might be included at a later stage. The present class NP4 pipes shall not be used for railway loading.
(Page 2, clause 1.1) - Insert the following at the end:
The requirements for collars are also covered by this standard.

NOTE - In addition to the requirements specified specifically for the collars, the requirements given in the following clauses shall also apply for collars:
$4.2,4.3,4.4,4.5,4.5 .1,4.5 .3,4.5 .4,6.1,6.2,6.2 .1$, $6.2 .2,6.3,6.3 .1,6.4,7.2,8.1,8.1 .1,8.1 .2,8.1 .3,8.1 .4$, 11.1 and 11.1.1.
(Page 2, clause 3.1) - Delete 'stch as, railway loading' from line 16 and 17 of column 3 of the informal table.

Gr. 1
(Page 3, clause 4.3) - Substitute the following for the existing clause:
4.3 Aggregates - Aggregates used for manufacture of unreinforced and reinforced concrete pipes shall conform to 3 of IS 383:19707. The maximum size of aggregate should not exceed one third the thickness of the pipe or 20 mm , whichever is smaller for pipes above 250 mm internal diameter. But for pipes of internal diameter 80 to 250 mm the maximum size of aggregate should be 10 mm .

NOTE - It is preferable to have the size and grading of aggregates conforming to IS 383:19707. It is also preferaable that materials finer this 75 micron $1 S$ Sieve is restricted to 3.0 percent by mass.'
(Page 4, clause 5.2) - Insert the following as a new para:
For non-welded cages spiral reinforcement of the same diameter shall be closely spaced at the end of the pipe for a length of 150 mm to minimize damage during handling. The spacing of such end spirals shall not exceed 50 mm or half the pitch whichever is less. Such spiral reinforcement at ends shall be part of the total spiral reinforcement specified in different tables.
(Page 4, clause 5.2.2) - Insert subject to the requirements of 5.2.2.1.' at the end and insert a new clause 5.2.2.1 as folows:
-5.2.2.1 Tolerances given in IS 432(Part 1):1982.2, IS 432(Part 2):19823, IS 226:19754 and IS 1786:19855 shall be applied to the minimum mass of longitudinal reinforcement specified in different tables. Total mass of longitudinal reinforcement shall be calculated taking into account the clear cover provided at each end of the pipe.

NOTE - For longitudinal reinforcement conforming to IS 432 (Part 2): 19823, tolerance. on mass shall be calculated from the diameter tolerance.
(Page 4, Footnote) - Insert the following new footnotes:
`2Specification for mild steel and medium tensile stee] bars and hard-drawn steel wire for concrete reinforcement Part 1 Mild steel and medium tensile steel bars (third revision).
${ }^{3}$ Specification for mild steel and medium tensile steel bars and hard-drawn steel wire for concrete reinforcement Part 2 Hard-drawn stepl wirn (third revision)

4Specification for structural steel (standard quality) (fifth revision).
${ }^{5}$ Specification for high strength deformed steel bars and wires for concrete reinforcement (third revision)."
(Page 4, clause 5.3, second, third and fourth sentence) Substitute the following for the existing sentences:

- Dimensions of collars shall be according to details given in Tables 1, 15 and 16 . The reinforcement for the collars shall be as given in Table 15 and 16 . The ends of collar reinforcement shall have a full ring at both ends.'
(Page 7, Table 2) -

1) Delete col (4), (5), (6) and (10)
2) Substitute ${ }^{\circ} 0.59^{\circ}$ for ${ }^{`} 0.33^{\circ}$ in col (8)
3) Substitute ${ }^{\circ} 0.16^{\circ}$ for ${ }^{`} 0.10^{\prime}$ and ${ }^{\circ} 0.18^{\prime}$ for ${ }^{`} 0.12^{\prime}$ in Sl No 1 and 2 respectively of col (9)
4) Substitute ' 12 or $8+8$ ' for ' $8+8$ ' in SI No 2 C and 21 of col (7)
5) Substitute ${ }^{`} 2.5 \mathrm{~m}^{\prime}$ for ${ }^{\prime} 2 \mathrm{~m}$ ' in Note 3.
6) Insert the following new Note:
'NOTE - Total mass of longitudinal reinforcement shall be calculated by multiplying the values given in column 8 by the length of the pipe and then deducting for the cover length provided at the two ends."
(Page 8, Table 3) -
7) Substitute ${ }^{\circ} 0.59^{\circ}$ for ${ }^{\circ} 0.33^{\prime}$ in col (4)

8) Substitute 8 or $6+6^{\circ}$ for ${ }^{`} 6+6^{`}$ in S1 No 12,13 and 14 of col (3)
9) Substitute ' 2.5 m ' for ${ }^{\prime} 2 \mathrm{~m}$ ' in Note 3
b) Delete Note 2 and renumber the subsequent Notes.
10) Delete 'and a minimum cement content of $400 \mathrm{~kg} / \mathrm{m}^{3}$. from Note 4.
11) Insert the following new Note:

- NOTE - Total mass of longitudinal reinforcement shall be calculated by multiplying the values given in col 4 by the length of the pipe and then deducting for the cover length provided at the two ends.'
(Page 9, Table 4) - Insert the following as Table 4:
-TABLE 4 : DESIGN AND STRENGTH TEST REQUIREMENTS OF CONCRETE PIPES OF CLASS NP4 - RETNPORCED CONCRETE, HRAVY-DUTY, NON-PRESSURE PIPES (Clauses 5.1.1, 5.1.2 5.1.3, 5.2.2, 6.3.2, and 7.1)

| NOMINAL | BARREL |  | REINEORCE | SENTS | STRENGTH TEST | REQUIREMENTS |

| 400 | 75 | 8 | 0.78 | 3.52 | 33.9 | 50.9 |
| 450 | 75 | 8 | 0.78 | 3.68 | 36.9 | 55.3 |
| 500 | 75 | 8 | 0.78 | 5.96 | 40.0 | 61.2 |
| 600 | 85 | 8 or 6+6 | 2.34 | 9.63 | 46.3 | 69.4 |
| 700 | 85 | 8 or 6+6 | 3.44 | 14.33 | 52.2 | 78.3 |
| 800 | 95 | 8 or 6+6 | 3.44 | 21.20 | 59.3 | 89.1 |
| 900 | 100 | $6+6$ | 3.44 | 27.13 | 66.3 | 99.4 |
| 1000 | 115 | $8+8$ | 6.04 | 35.48 | 72.6 | 108.9 |
| 1100 | 115 | $8+8$ | 6.04 | 43.76 | 80.4 | 120.6 |
| 1200 | 120 | $8+8$ | 6.04 | 53.07 | 88.3 | 132.4 |
| 1400 | 135 | $8+8$ | 9.36 | 77.62 | 104.2 | 156.4 |
| 1600 | 140 | 12+12 | 9.36 | 108.97 | 119.6 | 179.5 |
| 1800 | 150 | 12+12 | 14.88 | 150.22 | 135.3 | 203.0 |
| 2000 | 170 | $12+12$ | 14.88 | 151.79 | 135.3 | 203.0 |
| 2200 | 185 | 12+12 | 14.88 | 160.90 | 142.2 | 213.3 |
| 2400 | 200 | $12+12$ | 14.88 | 216.96 | 155.0 | 232.5 |
| 2600 | 215 | $12+12$ | 14.88 | 258.93 | 166.7 | 250.0 |

NOTE 1 - The actual internal diameter is to be declared by the manufacturer and tolerance is to be applied on the declared diameter (sece also 0.3.2)

NOTE 2 - The longitudinal reinforcement given in this table is valid for pipes up to 2.5 m effective length for internal dia of pipe up to 250 mm and 3 m effective length for higher diameter pipes.

NOTE 3 - Concrete for pipes above 1800 mm nominal diameter shall have a minimum compressive strength of $35 \mathrm{~N} / \mathrm{mm}^{2}$ at 28 days

NOTE 4 - If mild steel is used for spiral reinforcement the weight specified in col 5 shall be increased by a factor 140/125.

NOTE 5 - Total mass of longitudinal reinforcement shall be calculated by multiplying the values given in col 4 by the length of the pipe and then deducting for the cover length provided at the two ends.
(Page 9, Table 5) -

1) Substitute ${ }^{\circ} 0.59^{\prime}$ for ${ }^{`} 0.33^{\prime}$ in col
2) Substitute ${ }^{\circ} 0.16^{\prime}$ for ${ }^{\prime} 0.15$ ' in Sl No 1 of col (5)
3) Substitute ' 2.5 m ' for ${ }^{`} 2 \mathrm{~m}$ ’ in Note 4
4) Insert the following new Note:
'NOTE - Total mass of longitudinal reinforcement shall be calculated by multiplying the values given in col 4 by the length of the pipe and then deducting for the cover cover length provided at the two ends.
(Page 10, Table 6) -
5) Substitute ${ }^{\circ} 0.59^{\circ}$ for ${ }^{\circ} 0.33^{\circ}$ in col (4)
6) Substitute ' 8 or $6+6$ ’ for ${ }^{\prime} 6+6$ ' in 51 No 14 and 15 of col (3)
7) Substitute ' $2.5 \mathrm{~m}^{\prime}$ for ${ }^{\prime} 2 \mathrm{~m}$ ' in Note 4
8) Insert the following new Note:
`NOTF - Total mass of longitudinal reinforcement shall be calculated by multiplying the values given in column 4 by the length of the pipe and then deducting for the covex length provided at the two ends.
(Fage 11, Table 7) -
9) Substitute ${ }^{\circ} 0.59^{\prime}$ for ${ }^{\circ} 0.33^{\prime}$ in $\operatorname{col}$ (4)
10) Substitute ' 8 or $6+6$ ' for ' $6+6$ ' in 51 No 12 of col (3)
11) Substitute ${ }^{\prime} 2.5 \mathrm{~m}^{\prime}$ for ${ }^{\prime} 2 \mathrm{~m}$ ' in Note 4
12) Insert the following new Note:

NOTE - Total mass of longitudinal reinforcement. shall be calculated by multiplying the values given in col 4 by the length of the pipe and then deducting for the cover length provided at the two ends.'
(Page 13, Table 9, Note 2) - Substitute the following for the existing note:
'NOTE 2 - The dimensions DS2, DS3, LSP, TS, T, H, S, $H T$ and $K$ shall conform to the values given in this table as these are critical dimensions. Other dimensions are for guidance only. The following tolerances shall apply on the critical dimensions:

| Dimensions Tolers |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & D S 2, \quad D S 3 \\ & \& L S P \end{aligned}$ | The tolerances shall be as given below: |  |  |  |
|  | Chord | Toler- | Toler- | Toler- |
|  | Dia- | ence | ence | ence |
|  | meter <br> mm | for DSZ | for DS3 | $\begin{aligned} & \text { for LSP } \\ & \mathrm{mm} \end{aligned}$ |
|  | 11 | $\pm 2$ | $\pm 3$ | $\pm 4$ |
|  | 12 | $\pm 2$ | $\pm 3$ | $\pm 4$ |
|  | 16 | $\pm 2.5$ | $\pm 3.5$ | $\pm 5$ |
|  | 20 | $\pm 3$ | $\pm 4$ | $\pm 5.5$ |
|  | 22 | $\pm 3.5$ | $\pm 4.5$ | $\pm 6$ |
|  | 25 | $\pm 4$ | $\pm 5$ | $\pm 7$ |
| $T$ and $H T$ | Same as that of wall thickness given in 7.2 |  |  |  |
| TS and $H$ | Half the tolerance on wall thickness given in 7.2 |  |  |  |
| $K$ and $S$ | The tolerances shall be as given below: |  |  |  |
|  | Chord <br> Diameter mm |  | Tolerance $T$ | olerance |
|  |  |  | $K$ | mm |
|  |  |  | mm |  |
|  | 11 | $\pm 1$ |  | $\pm 0.75$ |
|  | 12 | $\pm 1$ |  | $\pm 0.75$ |
|  | 16. | $\pm 2$ |  | $\pm 1.25$ |

| 2000 | 19 | 110 | 200 | 12+12 | 1.00 | 13.30 |

NOTE 1 - Collars for sizes 2200 mm and above shall be made out of mild steel plate of 6 mm thickness, steel conforming to IS 226:1975 with outside painted.

NOTE 2 - If mild steel is used for spiral reinforcement, the weight specified in col 7 shall be increased by a factor 140/125.

NOTE 3 - Soft grade mild steel wire for spirals way be used for collars of pipes of internal diameter up to 150 mm only by increasing weight by a factor 140/84."
(Page 20, Clause 6.2.2) - Delete and renumber 6.2.3 as 6.2.2
(Page 20, Clause 6.3.1, First sentence)

1) Substitute the following for the first sentence:
'Pipes having barrel thickness 100 mm and above shall have double reinforcement cage and the amount of spiral steel in the outer cage shall be 75 percent of the mass of spiral stecl in the inner cage, whilst the total shall conform to the requirements specified in the relevant tables of this standard.

The mass of longitudinals in the outer cage and, inner agee should he the same, that is equal to half the total mass of longitudinals specified in the relevant tables.
2) Insert the following Note below the clause:
'NOTE - It is preferable that single reinforcement. cage should be located near the inner surface of the pipc: with adequate clear cover.
(Page 20, Clause 6.3.\%, Last sentence) - Substitute the following for the last sentence:

Diagonal reinforcement is a process requirement and shall not be counted against longitudinal and spiral reinforcement.
(Page 20, Clause 6.3.3) - Delete.
(Page 20, Clause 7.2) - Delete or socket' in 7.2 (b) and substitute the following for 7.2 (c):
© c) Wall thickness:

| 1) Up to and including 30 mm | $\begin{aligned} & +a m \\ & -1 m \end{aligned}$ |
| :---: | :---: |
| 2) Over 30 mm and up to and includine 50 mm | $\begin{aligned} & +8 \mathrm{~mm} \\ & -1.5 \mathrm{~mm} \end{aligned}$ |
| 3) Over 50 mm and up to and including 65 mm | $\begin{array}{r} 4 \mathrm{~mm} \\ +2 \mathrm{~mm} \end{array}$ |
| 4) Over 65 mm and.up to and including 80 mm | $+5 \mathrm{~mm}$ <br> - 2.5 mm |
| 5) Over 80 mm and up to and including 95 mm | $\begin{aligned} & +6 \mathrm{~mm} \\ & -3 \mathrm{~mm} \end{aligned}$ |
| 6) Over 95 mm | $\begin{aligned} & +7 \mathrm{mni} \\ & -3.5 \mathrm{~mm} \end{aligned}$ |

(Page 20, Clause 7.1. Last sentence) - Substjtute the following for the last sentence:

For collar jointed pipes effective length shall be $Z$ m or 2.5 m up to 250 mm nominal diameter pipes and $2.5,3.0,3.5$ or 4.0 m for pipes above 250 mm nominal diameter.
(Page 21, clause 10.1.3 and Table 15) - Substitute Table 17' for 'Table 15'
(Page 22, Clause 10.2.1.1 and 10.2.2) - Substitute 'Table 17" for ${ }^{\text {T Table } 15 \text { " }}$

# AMENDMENT NO. 3 SEPTEMBER 2001 <br> TO <br> IS 458:1988 SPECIFICATION FOR PRECAST CONCRETE PIPES (WITH AND WITHOUT REINFORCEMENT) 

## (Third Revision)

(Page 2, clause 0.3.1) - Insert the following at the end:
' $n$ ) Inclusion of details of NP3 and NP4 classes of pipes to be manufactured by casting process.'
(Page 2, clause 0.3.2) - Delete.
(Page 2, clause 0.3.3) (see also Amendment No. 1) - Delete.
(Page 2, clause 3.1, informal table, col 2, against Class NP3 and NP4) - Insert 'and also unreinforced (in case of pipes manufactured by casting process)' after the word 'reinforced'.
(Page 3, clause 4.2) - Insert 'or IS 12269:198714' at the end.
(Page 3, clause 4.4, first sentence) - Substitute the following for the existing sentence :
'Reinforcement used for the manufacture of reinforced concrete pipes shall conform to mild steel grade 1 or medium tensile steel bars of IS 432 (Part 1): $1982^{8}$ or hard-drawn steel wire of IS 432 (Part 2) : 1982 ${ }^{9}$ or structural steel (standard quality) bars of IS 2062:1992 ${ }^{10}$.'
(Page 3, clause 4.4, Note) - Substitute the following for the existing Note:
NOTE—W Wire fabric conforming to IS $1566: 1982^{12}$ or deformed bars and wires conforming to IS $1786: 1985{ }^{13}$ or plain hard-drawn steel wire for prestressed concrete conforming to IS 1785 (Part 1) : $1983^{15}$ or IS 1785 (Part 2): $1983^{16}$ may also be used. For such reinforcement maximum tensile stress shall be as given in 5.1.'
(Page 3, clause 4.5, first sentence) - Delete.
(Page 3, footnote 10) - Substitute the following for the existing footnote:
${ }^{10}$ Specification for steel for general structural purposes (fourth revision).'
(Page 3, footnote 14) - Delete footnote 14 and insert the following new footnotes:
${ }^{14}$ Specification for 53 grade ordinary Portland cement.
${ }^{15}$ Specification for plain hard-drawn steel wire for prestressed concrete: Part 1 Cold-drawn stress relieved wire (second revision).
${ }^{16}$ Specification for plain hard-drawn steel wire for prestressed concrete: Part 2 As drawn wire (first revision).'
(Page 3, clause 4.5.1, para 1) - Insert the following at the end of the para:
'However in case of pipes manufactured by casting process, concrete shall have minimum compressive strength as indicated in the Tables 3A, 3B, 4A and 4B for the respective classes of pipe.'
(Page 3, clause 4.6) - Insert the following new clauses after 4.6:
'4.7 Water - Water used for mixing of concrete and curing of pipes shall conform to 4.3 of IS $456: 2000^{2}$.
4,8 Chemical Admixtures - The admixtures, where used, shall conform to IS 9103: 19995.'
(Page 3, clause 5.1.1) - Substitute the following for the existing clause:
'5.1.1 The barrel wall thickness shall be such that under the specified hydrostatic test pressure, the maximum tensile stress in concrete, when considered as effective to take stress along with the tensile reinforcement, shall not exceed $2 \mathrm{~N} / \mathrm{mm}^{2}$ for pressure pipes and $1.5 \mathrm{~N} / \mathrm{mm}^{2}$ for non-pressure pipes. But the wall thickness shall be not less than those given in Tables 1 to 7 subject to $7.2(\mathrm{c})$, in case of pipes manufactured by spinning process. For pipes manufactured by casting process, the wall thickness shall be as given in Tables 3A, 3B, 4A and 4B.'
(Page 3, footnotes below clause 5.1.1) - Substitute the following footnote 2 for the existing footnote 2 and insert the following new footnote 5 :
${ }^{\text {'2 }}$ Code of practice for plain and reinforced concrete (fourth revision).
'Specification for admixtures for concrete (first revision).'
(Page 4, clause 5.1.3) - Insert the following at the end of the clause:
'in case of pipes manufactured by spinning process. For reinforced pipes manufactured by casting process, the minimum longitudinal reinforcement shall be as given in Tables 3B and 4B.'
[Page 4, clause 5.2.2, last sentence (see also Amendment No. 2)] - Substitute the following for the existing last sentence:
'In the absence of calculations and tests, the reinforcement given in Tables 2 to 7 for pipes manufactured with spinning method and in Tables 3 B and 4 B for pipes manufactured by casting process shall be used as minimum reinforcement subject to the requirements of 5.2.2.1.'
[Page 4, clause 5.3, (see also Amendment No. 2)] - Substitute the following for existing clause:
'5.3 The ends of concrete pipes used for water mains, sewers and irrigation shall be suitable for socket and spigot, roll on joints or confined gasket joints. Dimensions of spigot and socket for rubber ring roll on jointed pipes shall be as given in Tables 8 to 13 for pipes manufactured by spinning process. However, the dimensions of spigot and socket shall be as given in Tables 10A and 10B in case of pipes manufactured by casting process. Reinforcement in socket of rubber ring jointed pipes shall be as given in Table 14. However the ends of concrete pipes used for road culverts may be suitable for flush or collar joints (see Fig. 1 and Fig. 2). Dimensions of collars shall be according to details given in Tables 1,15 and 16. The reinforcement for collars shall be as given in Tables 15 and 16. The ends of collar reinforcement shall have a full ring at both ends.'
(Page 4, clause 5.3, Note 2) - Delete Note 2 and renumber Note 3 as Note 2.
(Page 4, clause 5.3.1) - Insert the following in the beginning:
'Only flexible rubber ring joints shall be used in the joints in (a) all pressure pipes, and (b) all non-pressure pipes except when used for road culverts.'
(Page 8, Table 3, col 1, heading) - Delete the word 'Nominal'.
(Page 8, Table 3, Note 1) - Delete.
(Page 8, Table 3) - Insert the following new Tables after Table 3:

Table 3A Design and Strength Test Requirements of Concrete Pipes of Class NP3 - Unreinforced Concrete, Medium-Duty, Non-Pressure Pipes Made by Casting Process
(Clauses 4.5.1, 5.1.1, 5.3 and 7.1)

| 500 | 70 | 8 | 0.78 | 5.56 | 40.0 | 61.2 |
| 600 | 75 | 8 or 6+6 | 2.34 | 8.50 | 46.3 | 69.4 |
| 700 | 85 | 8 or 6+6 | 3.44 | 12.78 | 52.2 | 78.3 |
| 800 | 95 | 8 or 6+6 | 3.44 | 16.72 | 59.3 | 89.1 |
| 900 | 100 | 6+6 | 3.44 | 20.92 | 66.3 | 99.4 |
| 1000 | 115 | $8+8$ | 6.04 | 26.70 | 72.6 | 108.9 |
| 1100 | 120 | $8+8$ | 6.04 | 35.60 | 80.4 | 120.6 |
| 1200 | 125 | $8+8$ | 6.04 | 42.42 | 88.3 | 132.4 |
| 1400 | 140 | $8+8$ | 9.36 | 53.39 | 104.2 | 156.4 |
| 1600 | 165 | $12+12$ | 9.36 | 79.92 | 119.6 | 179.5 |
| 1800 | 180 | $12+12$ | 14.88 | 85.75 | 135.3 | 203.0 |
| NOTE - Concrete for pipes shall have a minimum compressive strength of $35 \mathrm{~N} / \mathrm{mm}^{2}$ at 28 days. |  |  |  |  |  |  |

(Page 12, Table 8) - Insert the following Note at the end of the Table:
NOTE - The dimensions $D_{i}, h$ and $e$ shall conform to the values given in this table as these are critical dimensions. The following tolerances shall apply on the critical dimensions :

| Dimensions | Tolerances |
| :---: | :--- |
| $D_{2}$ | $\pm 3 \mathrm{~mm}$ for pipes up to and including 300 mm internal diameter |
|  | $\pm 4 \mathrm{~mm}$ for pipes over 300 mm internal diameter. |
| $h$ | $\pm 3 \mathrm{~mm}$ for dimensions up to 60 mm |
|  | $\pm 5 \mathrm{~mm}$ for dimensions above 60 mm |
| $e$ | $\pm 2 \mathrm{~mm}$ for dimensions up to 30 mm |
|  | $\pm 3 \mathrm{~mm}$ for dimensions above 30 mm |

(Page 14, Table 10) - Insert the following new Tables 10A and 10B after Table 10:
Table 10A Spigot and Socket Dimensions for NP3 Reinforced and Unreinforced and NP4 Reinforced Pipes Made by Vertical Casting Process
(Clause 5.3)
All dimensions in millimetres.

[^8]Table 10B Spigot and Socket Dimensions for NP4 Unreinforced Pipes Made by Casting Process
(Clause 5.3)
All dimensions in millimetres.

[^9]$d_{\mathrm{s}}, D_{\mathrm{m}}, L_{\mathrm{m}}$ and $l_{\mathrm{s}}$ are nominal dimensions.
(Amendment No. 2, Note 2 of Table 15 and Note 3 of Table 16) - Substitute the following for the existing Note :
'Soft grade mild steel wire may be used as reinforcement for collars of pipes of nominal internal diameter up to 250 mm only by increasing the weight by a factor 140/84. Where only soft grade mild steel wire is used for making collar cages, the weight of reinforcement shall be total weight of col 6 and 7 multiplied by 140/84. This is allowed as a process requirement.'
(Amendment No. 2, Table 16, Note 1) - Insert the following at the end of Note 1:
'The details of mild steel collars shall be as follows:

(Page 20, clause 6.3, second and third sentences) - Substitute the following for the existing sentences: 'The cages shall consist of spirals or circular rings and straights of hard-drawn steel wire or mild steel rod. Reinforcement cages shall be placed symmetrically with respect to the thickness of the pipe wall.'
(Page 20, clause 6.4.1, first sentence) - Insert the following at the end of first sentence:
'or 53 grade ordinary Portland cement.'
(Page 20, clause 7.1):
a) Insert the following at the end of first sentence:
'However, in case of pipes manufactured by casting process, the internal diameter, wall thickness, the minimum reinforcement (in case of reinforced pipes) and strength test requirements for different classes of pipes shall be as given in Tables 3A, 3B, 4A and 4B.'
b) Insert the following at the end of the clause :
'For collar jointed class NP3 and NP4 pipes of nominal internal diameter 900 mm and above, the effective length may also be 1.25 m .'
(Page 21, Note under clause 7.2) - Insert the following at the end:
'in case of pipes manufactured by spinning process.'
(Page 21, clause 8.2) - Substitute the following for the existing clause :
'8.2 Deviation from Straight - The deviation from straight in any pipe throughout its effective length, tested by means of a rigid straight edge as described in IS $3597: 1998^{1}$ shall not exceed, for all diameters, 3 mm for every metre run.'
(Page 21, clause 9.1.1, first sentence) - Substitute the following for the existing sentence :
'During manufacture, tests on compressive strength of concrete cubes shall be done as described in IS $516: 1959^{2}$. For pressure pipes splitting tensile strength tests of concrete cylinders shall be carried out as described in IS 5816 : $1999^{3}$.'
(Page 21, footnotes under clause 9.1.1) - Substitute the following for the existing footnotes:
' Method of test for concrete pipes (second revision).
${ }^{2}$ Method of test for strength of concrete.
${ }^{3}$ Method of test for splitting tensile strength of concrete (first revision).'
(Page 21, clause 9.2) - Substitute the following for the existing clause :
'9.2 The specimens of pipes selected in accordance with 9.1 shall be subjected to the following tests in accordance with IS $3597: 1998^{1}$ :
a) Hydrostatic test,
b) Three-edge bearing test, and
c) Permeability test.'
(Page 21, clauses 9.2.1 and 9.2.2) - Substitute the following for the existing clauses :
'9.2.1 Permeability test when conducted in accordance with the method described in IS $3597: 1998^{1}$, shall satisfy the following requirements. The tests shall be done on outside surface of pipe at two places as shown in Fig. 5.

Fig. 5 Permeability Test

### 9.2.1.1 Initial absorption

The drop of water level in the stand pipe at the end of 2 h is the initial absorption. This shall not exceed $1.5 \mathrm{~cm}^{3}$ and the difference in any two readings shall not be more than $0.5 \mathrm{~cm}^{3}$.

### 9.2.1.2 Final permeability

Fill the water in the stand pipe again up to the mark and take readings at half-hour interval up to 4 h . Absorption in the fourth hour is the final permeability. The average reading of two tests conducted on a pipe shall be expressed in $\mathrm{cm}^{3}$ and this shall not exceed $0.3 \mathrm{~cm}^{3}$.'
(Page 21, footnote at the end of the page) - Substitute the following for the existing footnote:
' Methods of test for concrete pipes (second revision).'

# AMENDMENT NO. 4 MARCH 2003 <br> TO <br> IS 458: 1988 SPECIFICATION FOR PRECAST CONCRETE PIPES (WITH AND WITHOUT REINFORCEMENT) 

(Third Revision)
[ Page 21, clause 9.2.1 ( see Amendment No. 3)] - Substitute the following for the existing:
'9.2.1 Permeability test when conducted in accordance with the method described in IS 3597 shall meet requirement of final permeability, which shall not exceed $0.3 \mathrm{~cm}^{3}$.

NOTE - It is recommended that initial absorption should not exceed $2.0 \mathrm{~cm}^{3}$ and the difference in any two readings during initial absorption should not be more than $0.8 \mathrm{~cm}^{3}$.
[Page 21, Fig. 5 ( see Amendment No. 3 )] - Delete.
[ Page 21, clause 9.2.1.1( see Amendment No. 3 )] - Delete.
[ Page 21, clause 9.2.1.2( see Amendment No. 3 )] - Delete.
[ Page 3, clause 4.7( see Amendment No. 3 )] - Substitute the following for the existing:
'4.7 Water - Water used for mixing of concrete and curing of pipes shall conform to 5.4 of IS $456: 2000$.'

[^0]:    ${ }^{1}$ Code of practice for laying of concrete pipes (first revision).
